

Multiplication Table Program

I created a Python program that shows multiplication tables.

This program allows the user to choose an option from the menu.

The user can display the multiplication table for one number or all tables from 1 to 10.

The program also checks incorrect input and shows error messages.

PYTHON ELEMENTS USED:

- PRINT()
- INPUT()
- INT()
- TRY/EXCEPT
- WHILE
- FOR
- IF/ELIF/ELSE

**THE PROGRAM WORKS CORRECTLY
AND SHOWS MULTIPLICATION TABLES
ACCORDING TO THE USER'S CHOICE.**
